but, it is difficult to find that mocap device plug-in crack is match for my needs. So, if i can get any plugin for set up motion recording for ogre in unity using kinect? A: I tried using it with Virtual Reality headsets for motion capture. When I exported the Oculus export, the coordinates in the VR headset were not correct and was hard to correct. Unity's Oculus export for motion capture supports Oculus Crescent 2, Crescent 1 and Crescent Plus headsets. It seems like the Crescent headset is not supported at the moment. So I don't think you can use the Oculus export at the moment. Instead, Unity provides an export for Xbox Wireless Controllers and the One X controllers. The export of Xbox Controllers can be found in the Xbox plugin for Unity. These motions are then shared on the Unity Development Cloud, where you can see them in the editor or access them in your Unity games. The Windows project is updated every hour and the Xbox project is updated every 30 minutes, so you can find a new version on the Xbox plugin for Unity's GitHub repository. Installation The steps I did to get this working were: Download the Xbox Plugin from here Unzip the files Uninstall the Oculus plugin Run the Xbox plugin and set the export of the Xbox controllers as required. When exported from the Oculus development version on Steam, you can find the same controller model as your Oculus Rift. The plugin will require you to have the Oculus Rift running to export the motions, but otherwise it will work with an Xbox or any webcam. Using in your Unity Scene To use the Xbox plugin in your Unity scene you need to import it like this: Drag the zip file into the Unity project to a location where you can access it from the Unity editor. You have to drag and drop this zip file. Run the Xbox plugin to export the motions, it will run from the project location with the file specified in the zip file. If this file is not there, it will create a new file. To use these motions, you need to drag-drop them into the scene on the Unity editor as well. In the same location as the zip file. If you have multiple motions, you can add them in the same folder as well. A: I am doing the same thing as you. I have the mocap plug-in and the mocap device
