Anchor objects. Quickly place references on drawings to help clarify your thinking. They can be easily changed, and they're always positioned in the proper location on the same plane. They're called anchors because they help you stay on the plan and keep your drawing steady, regardless of whether it's floating or being moved around. Comments. Find out what others have to say about your design by incorporating comments into your drawings. No more tedious emailing to get feedback. (video: 3:42 min.) Applied reality. Draw a real-world view of your design on your computer and share it with others. You can even annotate or annotate more annotations. Then you can easily send the drawing to another user for review and discussion. (video: 3:48 min.) Model space. Now you can work in a more intuitive model space with the ability to toggle between scale and perspective view, easily share with others, and get feedback on how it looks in 3D. (video: 3:54 min.) Shapes and linetypes. Create more sophisticated layouts with layered paths and fill effects. Draw custom shapes with precise snapping and place objects along the path of a spline, path, or drawing object. Use linetypes to quickly add simple symbols that appear in layers. (video: 2:50 min.) Custom paper. Easily create custom paper templates in a few easy steps. Upload your own paper designs from an existing paper clip template or use any of your own paper designs. (video: 1:52 min.)
