Microscope PC Diagnostics.Predictors of long-term complication after radical prostatectomy. To evaluate the predictors of long-term complications, including erectile dysfunction, after radical retropubic prostatectomy and determine the factors that affect erectile function in men who underwent radical retropubic prostatectomy. This was a prospective study of men who underwent radical retropubic prostatectomy. The International Index of Erectile Function questionnaire was used to evaluate erectile dysfunction before surgery and after 12 months of followup. Thirty-three patients (35.9%) had early complications: 6% (2/33) had urethrocutaneous fistula and 2% (1/33) had early urinary incontinence. After 12 months, 28 men (62%) experienced late complications, which included incontinence in 23 (56%), impotence in 27 (69%), increased urinary tract infection in 4 (11%), bladder neck contracture in 1 (2.7%), urethral stricture in 1 (2.7%), and hematoma in 1 (2.7%). The cause of erectile dysfunction was unknown in 4 (11%) patients, decreased testosterone levels in 4 (11%), depression in 1 (2.7%), and pelvic neuropathy in 1 (2.7%). At 12
