With a fresh installation of Windows 10, you would be faced with the familiar "restricted sign-in" error, where you have to enter your phone number to be able to sign in to your PC. There is a workaround, however, which allows you to bypass the restriction and sign into your PC without having to enter your phone number. The method can be activated by visiting the Settings app, then selecting Accounts > Accounts > Sign-in and security > Sign-in options. There you would see a big "X" with a red line through it, indicating that you don't have to enter your phone number. Tap or click the option "Set this option as the default sign-in option for new devices," then tap or click "OK" to set it as the default option. You would then need to do another "repair" if your Windows is a fresh installation. You could also try the fix suggested by Avast online support engineers, which involves downloading and running the Avast Repair tool to fix the problem. How to bypass Windows 10's "restricted sign-in" feature How to bypass Windows 10's "restricted sign-in" feature via the registry If you have been struggling with the "restricted sign-in" problem, you can fix it by disabling the Restrict sign-in option in Windows 10. In the following steps, we will be focusing on a certain registry value located in the HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon registry key. Restart the PC in "normal mode" by pressing the power button and then start tapping or clicking the X button in the top-right corner. You need to be sure that you hit the X button in the top-right corner when the PC is still not starting. This should bring you to a "boot options" menu. Here, you would have to select the "Advanced startup" option. Then, you would have to highlight "Safe Mode with networking" and press Enter. Now that you have successfully booted in "Safe Mode with networking," press the Win+R keys and then enter "regedit" in the search box. From the "Open" dialog, find the HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon registry key. Right-click on it, and select "Open", then select "Edit".
