You will stumble on a lot of awkwardness in day to day operations and in spite of all the great features, it's sometimes painful to use. I echo what you said. It's great to have latest and greatest software, but to be happy with it, you need to learn Adobe UX design principles. With the aging of its products, I believe that Lightroom would benefit from this kind of design input. Probably the greatest strength of Lightroom is its huge library of compatibility with Photoshop, as well as other applications. Obviously, most have to do with Adobe Elements, and Lightroom does a fantastic job of making sure that you can use these tools without even being aware of them. Consider the addition of its own raster-to-vector converter. The new entire imaging workflow, which can be found in the workflow categories that are available, is also incredibly easy to use. With most new features, Lightroom provides a fairly simple wizard that you can use to import and export your images in any manner that you prefer, and these tools can be easily edited to your heart's content. It's also another part of Lightroom that should be noted. It is incredibly easy to maintain that information properly and produce a lossless JPEG image after a resize. And when you perform those steps, the editing tools are completely native to Lightroom, so your changes don't need to be transferred to Photoshop.
